

NxGen Communications and APPI Partner to Distribute Patented Technology Peer to Peer voice communications with no hands

March 2nd, 2018 CALGARY, ALBERTA. **NxGEN Communications Corp.** (“NxGEN”) is proud to announce it has entered into licensing and distribution agreements as well as equity participation in APPI-Technology SAS of Nimes, France. The Letter of Intent and subsequent definitive agreements between the parties will allow NxGen to market and distribute APPI products to Central and South America on an exclusive basis, while working with our North American partner channels for sales and distribution to other global markets.

NxGen will lead the development of the online application of the current product offering referred to as “APPI-WI” in concert with the developers of APPI devices. APPI-WI will enable users to quickly build a group from their contacts and launch secure peer to peer communications in a completely hands free environment.

APPI and NxGen will be attending the International Wireless Communications Expo (IWCE) to be held in Orlando, Florida on March 5-9, 2018. Attendees are welcome to visit booth 2078 to meet with representatives from both companies and enjoy a hands-on experience of the APPI line of products.

“APPI-Technology is a communication device manufacturer that has numerous patents and on-going patent filings around our hands free peer to peer solution which enables communication to occur even when no other wireless network coverage exists”, stated Mr. Denis Coulon, President of APPI-Technology.

“APPI is pleased to be working with NxGen to facilitate the development of the APPI-WI app and to provide access to global markets through NxGen’s marketing and sales channels” added Mr. Coulon.

“NxGen is currently pursuing the deployment of reliable high-speed wireless internet access to large underserved rural areas throughout the Americas and we are proud to be working with the professional development team at APPI to provide communication capabilities to groups when limited or no cellular coverage exists”, stated Dan Pacholik, CEO of NxGen Communications. “
